

User Intent Taxonomy

The missing layer in programmatic advertising.

Content Taxonomy

Answers:
What is the subject matter of the page?

Data: (e.g.,
Automotive,
Travel)

Audience Taxonomy

Answers: What segment does this user resemble?

Data: (e.g.,
High-Income,
In-Market)

Ad Product Taxonomy

Answers: What commercial entities are being marketed?

Data: (e.g.,
Vehicles,
Loans)

The Unanswered Question:

Is the user just learning, comparing options, or actively trying to buy, book, or request a quote right now?

Topic = Automotive

how do electric cars work

Hidden Behavior tag:
Introductory Learning

Operational Value tag:
Reporting Only / Non-Commercial

best suv lease deals near me

Hidden Behavior tag:
Ready to Buy Major Item + Local + Deal Seeking

Operational Value tag:
Transaction Readiness / Eligible for Activation

Topic $\neq$ Intent. Two pages about the same topic reflect radically different operational value.

From:

This page is about automotive.

To:

This page shows transaction-ready automotive purchase intent with local and deal-seeking modifiers.

Behavior (Intent Pattern) - e.g.,
e.g., Comparison, Purchase, Support

Comparison + B2B Solutions

Comparison + Automotive

Vertical (Intent Domain) - e.g., Automotive, B2B Solutions, Travel

Summary: Scalability through Separation

Comparison is a pattern. Automotive is a domain. Forcing them into a single merged label (e.g., 'Automotive Comparison Intent') breaks scalability. Separating them makes the framework easier to govern, classify, and activate.

Core Signal:
Intent Pattern: Everyday Item
Purchase | Domain: Retail

Modifier: Deal Seeking

Modifier: Local

Modifier: Urgency

A highly sharpened, highly actionable
performance signal.

Rule

Modifiers cut across
multiple domains and
patterns.

They act as contextual
overlays, not top-level
branches, preventing
taxonomy bloat.

Readiness Spectrum

Strategic Insight: Commercial Investigation $\neq$ Transaction Readiness.
They require entirely different bid strategies and KPI alignments.

Core Insight: Not every inferred signal should be targeted. Actionability is a first-class dimension.

Taxonomy in Action: B2C Comparison Matrix

QUERY INPUT	TAXONOMY CLASSIFICATION
Automotive: best hybrid suv for family of 5	Pattern: Comparison Intent Stage: Comparison Readiness: Commercial Investigation Actionability: Eligible w/ Strong Confidence
Travel: cheap flights to las vegas this weekend	Pattern: Flight Booking Modifiers: Deal Seeking, Urgency Readiness: Transaction Readiness Actionability: Eligible
Retail: best espresso machine under 300	Pattern: Feature Comparison Modifier: Budget Conscious Actionability: Eligible w/ Strong Confidence

Taxonomy in Action: B2B & Sensitive Categories

QUERY INPUT	TAXONOMY CLASSIFICATION
B2B SaaS: salesforce demo request	Pattern: Demo Request Domain: B2B Solutions Readiness: Transaction Readiness Lead Gen: High
Finance: mortgage refinance rates today	Pattern: Financing Quote Domain: Real Estate Scope: Contextual Only (Potentially Sensitive) 
Insurance: how to file homeowners insurance claim	Pattern: Issue Resolution Readiness: Post Transaction KPI: Support Resolution Scope: Contextual Only (Potentially Sensitive) 

Programmatic Use Cases

Contextual Targeting

Uses **Pattern** **Domain** **Readiness** **Actionability**

(e.g., Target Auto + Purchase Intent + Transaction Ready)

Deal Packaging / PMPs

Uses **Pattern** **Domain** **Performance Utility**

(e.g., Build a PMP around B2B Solutions + Vendor Focused + High Utility)

Reporting & Insights

Uses **Pattern** **Stage** **Readiness**

(e.g., Report on inventory breakdown: Informational vs. Investigation vs. Readiness)

ML Training & Labeling

Uses **Pattern** **Domain** **Modifier** **Schema**

Supports hierarchical labeling and inference output.

Implementation Architecture

Modular TSV Repository

Why Multiple Files?

A single monolithic file creates overlap and poor usability. Modularity allows independent dimension reuse.

Campaign System

Extracts: Pattern, Domain, Stage, Actionability.

Pattern

The 'Start Simple' Blueprint

Phase 1: The Minimum Viable Implementation (Start Here)

1. Intent Pattern ●
2. Intent Domain ●
3. Intent Stage ●
4. Commercial Readiness ●
5. Actionability ●
6. Confidence Score ●

Phase 2: Advanced Enrichment (Add Later)

- Modifiers, Strength, ●
- Performance Utility, ML Schemas. ●

First recommended use case: Contextual packaging and reporting before direct bid-strategy activation.

Before

“

This page is about automotive.

After

“

This page shows automotive comparison behavior with strong commercial investigation and moderate activation value.

The Paradigm Shift: Moving the ecosystem from broad contextual categories to actionable intent understanding. Safely bridging the gap between content consumption and transaction readiness.
